

SUSTAINABILITY REPORT 2020

Our mission

is to provide all-in-one support for internationalization and relocation to Slovenia for foreign businessmen and companies by offering an innovative time-saving tool for collecting relevant information and a custom-made mix of services required for doing business and living in Slovenia. We care about our customers, environment, and coworkers therefore an important part of our mission is also sustainability.

What have we achieved in 2020?

Project Golden Residence

We work with partners all over the world. We understand the importance of foreigners to feel good and welcome in our country. To »Feel Slovenia« is to be welcome. Therefore, we mainly worked on innovative project Golden Residence. Soon we will be able to welcome guests in a sustainable, authentic, luxury residence with personal approach for those who appreciate peace, privacy and high quality of living.

Paper consumption

We understand the importance of sustainability also in our work therefore, we decided to take some measures ourselves. We started with the reduction of paper consumption. We are using only certified recycled paper for printing and writing. Discharged paper is used for meeting notes if necessary. We took extra good care on waste separation in the office.

High-quality equipment

All equipment that we have bought in 2020 was of high quality. When buying it, we considered also the sustainability criteria: eco certificates and energy saving standards.

Paperless business

We continued to work on paperless-business. We encourage our employees and our external co-workers to have only e-mail communication if possible. We have also decided to transfer some of the bills on the e-mail account and cancel paper bills.
